Dual Layer Amnion Chorion Membrane
Advanced Biologic Solutions

REVITALON[™]

REVITALON™

As a natural layer surrounding the fetus, the amniotic membrane is composed of two layers: the amnion – the layers closest to the fetus, and the chorion – the layers closest to the mother.

Together, these layers provide a protective barrier to accommodate the growing fetus. Studies show that amniotic membranes contain a variety of growth factors in utero, and the protective features of these layers make amnion chorion membranes ideal for homologous use as a barrier in a variety of applications.

REVITALON™ is placed in the pouch Amnion side down. A notch is cut in the top left corner of the graft to indicate that the Amnion side is oriented down.

REVITALON™ has increased thickness to improve suture passing capabilities during implantation and may be anchored by method of choice. The graft's solubility allows for rapid rehydration once in place.

Item No.	Description
MA915218	4 X 4 CM
MA915318	4 X 6 CM
MA917918	4 X 8 CM
MA915418	6 X 6 CM
MA918018	7 X 7 CM
